WORK EXPERIENCE

Data Analyst | CASK | Ho Chi Minh City, Vietnam **01/2026 – 05/2026**

- Built reporting and analytics layers from operational data for recurring reporting and ad hoc business analysis.
- Automated recurring SQL, Excel, Power BI, and Python reporting workflows, cutting monthly manual reporting effort by approx. 8–10 hours.
- Collaborated primarily with Marketing, alongside Sales and the Board of Directors, to turn CRM and business reporting needs into Power BI dashboards, KPI views, and recurring reports.
- Worked with Zoho CRM and Google Analytics data for customer, marketing, and sales performance analysis.
- Defined reusable KPI logic, data cleaning rules, and validation checks to improve reporting consistency and reliability.
- Created documentation and refresh processes for recurring management reporting and data-quality review.

PUBLICATION

First Author | DMO Fintech 2026 Workshop @ PAKDD | Hong Kong
Financial-Condition-Guided Retrieval for Adaptive Bayesian Decision Forecasting Under Structural Breaks — published in Springer Lecture Notes in Computer Science (LNCS) (Q2 Scopus) conference proceedings.

- Proposed an FCI-guided Bayesian forecasting framework that translates hypotheses about macro-financial regime shifts into a probabilistic model, combining Bayesian inference with retrieval-based conditioning on financial conditions.
- Backtested the framework via NASDAQ walk-forward forecasting with a shuffled-retrieval placebo control, ensuring robust, statistically sound evaluation of predictive performance.
- Improved probabilistic forecasting quality over baselines (CRPS, log predictive density) across walk-forward windows, with gains concentrated around policy-event periods.

PORTFOLIO PROJECTS

CASK Database Rebuild | *Supabase/PostgreSQL, Dagster, Zoho CRM, Google Analytics, Power BI*

- Consolidated customer data from Zoho CRM and marketing analytics from Google Analytics into a unified Supabase/PostgreSQL database — a single source of truth for reporting and analysis.
- Built an ELT pipeline with Dagster, automated triggers, and validation checks for data freshness and pipeline reliability.
- Validated and remodeled Power BI data models and dashboards on the standardized layer, reducing reporting inconsistencies.

VietNova End-to-End Banking Data Platform | *Python, SQL, PostgreSQL, MinIO, dbt, Docker Compose*

- Built a 100% synthetic banking platform across 6 source domains and 16 entities using Python ELT, immutable MinIO/PostgreSQL landing/raw layers, and dbt.
- Developed 5 dbt marts for Customer 360, acquisition, growth funnel, campaign performance, and digital banking with versioned contracts, tokenized identity, and lineage.
- Validated 17 golden cases and 471 selector checks; enforced idempotent replay, reconciliation, quarantine, and fail-closed publication.

QuantVN | *Python, Docker, GitHub Actions, REST APIs, LangGraph, AI agent*

- Automated OHLCV data pipelines for 500+ Vietnamese stocks over 7+ years, with data-integrity checks ensuring research-grade data quality; fully automated CI/CD with Docker and GitHub Actions.
- Developed custom computational analysis tools and REST APIs for exploring market data and testing research ideas, plus AI evaluation workflows measuring assistant outputs against market ground truth.
- Built a finance AI assistant with multi-provider LLM routing, grounding validation, and anti-hallucination guardrails evaluated against real market data.

ACHIEVEMENTS

1st Place | The Finnovative Hackathon 2026

- Built an RWA tokenization prototype with invoice data pipelines, contract risk scoring, and investor dashboard for portfolio monitoring.
- Designed data-driven risk scoring logic to evaluate factoring contract creditworthiness and support investor decision-making.

Top 10 Finalist | DAZONE Data Analytics Competition 2025

- Applied Python/SQL for EDA, data cleaning, normalization, and business metric design, converting raw data into performance insights.
- Conducted domain research to align dataset characteristics with company business models and define meaningful performance indicators.

Top 15 Finalist | RMIT Business Analytics Champion 2025

- Delivered a business analytics case solution combining KPI definition, domain research, insight generation, and recommendations.
- Worked under case-competition constraints to structure analysis and translate findings into business implications.

TECHNICAL SKILLS

Data Analysis & Reporting: SQL, Power BI, Excel, DAX, Power Query, KPI dashboards, ad hoc analysis, data cleaning, dashboard management, business reporting
Programming & Automation: Python, Pandas, Polars, PySpark, R, workflow automation, report automation, data validation scripts
Statistics & Modeling: statistical analysis, hypothesis testing, predictive modeling, EDA, data validation
Data Engineering & Storage: Data warehouse, ETL/ELT, dbt, BigQuery, Airflow, Dagster, PostgreSQL, MySQL, MongoDB, data modeling, data quality checks
Cloud & Tools: Google Cloud, Azure, AWS, Docker, Terraform, Linux/Ubuntu, Git, GitHub Actions, Looker Studio, CLI automation
AI/ML & Productivity: Scikit-learn, PyTorch, LLM workflow automation, Claude Code, OpenAI Codex, AI-assisted development

EDUCATION & CERTIFICATIONS

Bachelor of Financial Technology | University of Economics and Law, VNUHCM **08/2022 – 08/2026**
Relevant areas: Finance, Banking, Data Analytics, Statistical Modeling, Econometrics, Business Intelligence, Database Systems
Languages: English (APTIS B2), Vietnamese (Native)
Certifications: NVIDIA End-to-End Data Science Workflows, Data Science (edX x HarvardX), SQL (Intermediate),Data Analyst Associate (Datacamp)
