

LIEU HOAI PHUC

DATA ANALYST / ANALYTICS ENGINEER

0931430750 | phuclieu03@gmail.com | [Github](#) | [Linkedin](#) | Ho Chi Minh City, Vietnam

Data Analyst & Analytics Engineer with hands-on experience in dashboard automation, business reporting, ad hoc analysis, and data warehouse development. Financial Technology background with strong SQL, Python, Power BI, and data pipeline skills. Experienced in standardizing business datasets, defining KPI logic, automating recurring reports, and building reusable analytics assets for data-driven decision-making in business and financial contexts.

TECHNICAL SKILLS

Data Analysis & Reporting: SQL, Power BI, Excel, DAX, Power Query, KPI dashboards, ad hoc analysis, data cleaning, dashboard management, business reporting

Programming & Automation: Python, Pandas, Polars, PySpark, R, workflow automation, report automation, data validation scripts, API-based data extraction

Data Engineering & Storage: Data warehouse, ETL/ELT, dbt, BigQuery, Airflow, PostgreSQL, MySQL, MongoDB, data modeling, data quality checks

Cloud & Tools: Google Cloud, Azure, AWS, Docker, Terraform, Linux/Ubuntu, Git, GitHub Actions, Looker Studio, CLI automation

AI/ML & Productivity: Scikit-learn, PyTorch, LLM workflow automation, Claude Code, OpenAI Codex, AI-assisted development for analytics tasks

WORK EXPERIENCE

Data Analyst | CASK | Ho Chi Minh City, Vietnam

01/2026 – 05/2026

- Built DWH/reporting layers by consolidating operational datasets into standardized analytics tables for business reporting and ad hoc analysis.
- Automated recurring SQL, Excel, Power BI, and Python reporting workflows, reducing monthly manual reporting effort by approx. 8-10 hours.
- Defined reusable KPI logic, data cleaning rules, and validation checks to improve reporting consistency and reduce duplicated ad hoc work.
- Translated stakeholder reporting needs into Power BI dashboards, automated templates, and repeatable pipeline logic for business monitoring.
- Standardized report inputs, naming conventions, and transformation steps to improve data traceability and reduce manual reconciliation errors.
- Created refresh checklists and documentation for data quality review, report handover, and recurring management reporting processes.

PUBLICATION

First Author | Accepted at DMO Fintech 2026 Workshop, PAKDD Conference, Hong Kong

Financial-Condition-Guided Retrieval for Adaptive Bayesian Decision Forecasting Under Structural Breaks

- Proposed an FCI-guided Bayesian forecasting framework for adapting to macro-financial regime shifts; validated with NASDAQ walk-forward forecasting and shuffled-retrieval placebo control.

ACHIEVEMENTS

1st Place | The Finnovative Hackathon 2026

- Built an RWA tokenization prototype with invoice data pipelines, contract risk scoring, and investor dashboard for liquidity and portfolio monitoring.
- Designed data-driven risk scoring logic to evaluate factoring contract creditworthiness and support investor decision-making.

Top 10 Finalist | DAZONE Data Analytics Competition 2025

- Applied Python/SQL for EDA, data cleaning, normalization, and business metric design, converting raw data into performance insights.
- Conducted domain research to align dataset characteristics with company business models and define meaningful performance indicators.

Top 15 Finalist | RMIT Business Analytics Champion 2025

- Delivered a business analytics case solution combining KPI definition, domain research, insight generation, and actionable recommendations.
- Worked under case-competition constraints to structure analysis, communicate findings, and translate data outputs into business implications.

PORTFOLIO PROJECTS

HCMC Last-Mile Data Platform

- Built an end-to-end logistics data platform using Python, Polars, dbt, BigQuery, Looker Studio, and Airflow; designed Bronze/Silver/Gold data layers.
- Modeled warehouse-ready marts for SLA breach, first-attempt success, RTS, hub backlog, delivery failure, and scheduled KPI reporting.
- Structured the platform with analytics-engineering practices, reusable transformations, and dashboard-ready metrics for operational monitoring.

QuantVN - Stock Market Analytics & AI Assistant Platform

- Built a finance AI assistant with multi-provider LLM routing, grounding validation, and anti-hallucination guardrails against market data.
- Automated OHLCV data pipelines for 500+ stocks over 7+ years with integrity checks, Docker/GitHub Actions CI/CD, and AI evaluation workflows.
- Developed REST APIs and full-stack analytics components to support financial data exploration, validation, and AI-assisted insights.

EDUCATION & CERTIFICATIONS

Bachelor of Financial Technology | University of Economics and Law, VNUHCM

01/2022 – 08/2026

Relevant areas: Finance, Banking, Data Analytics, Statistical Modeling, Econometrics, Business Intelligence, Database Systems

Languages: English (Fluent), Vietnamese (Native)

Certifications: NVIDIA End-to-End Data Science Workflows, Data Science (edX x HarvardX), SQL (Intermediate)
